

▶▶ AIR CONDITIONING AND REFRIGERATION UNITS

Over the forty years since Company founding, USHIO REINETSU has prospered thanks to the generous support of so many shipbuilders and ship owners, especially in the maritime city of Imabari, Ehime. At present, we are maintaining our top market share in Japan as a maker of air conditioning and refrigeration units, as well as a maker of marine elevators. We are also receiving orders from overseas, enjoying healthy support from the world. We have established local subsidiaries in China and South Korea, increasing our international competitiveness from a more global perspective, while also resolutely taking on the challenges of a range of business fields with the principle of “keep tackling techniques others cannot copy.”

USHIO products are not just about making people comfortable—we also want to be kind to the environment. In addition, we hope to continue to provide the maximum level of services and offer responses to each individual proposal from clients, using our strengths to contribute to the local region as a company beloved by all.

Air conditioning, refrigeration/freezer units, elevators and dehumidifier systems, and more: you will find many of USHIO products on board ships to improve the environmental quality and maintain cargo quality and comfortable conditions for crews at sea. Thanks to our years of engineering experience that allow us to respond to client needs that differ with each ship, based on its type, route, environment, and many other factors, we can provide a total package from design to manufacture, installation, and after-sales service. We are also working on creating products that emphasize environmentalism, such as sales of our environmentally-friendly MGO Cooling System, as well as through reducing the amount of energy our products require.
